

Arduino TPS

ATtiny84 Layout Documentation

Schematic

Layout

Connections

All connections to the board are described here.

Analog

The analog input provide access to A/D Convert 1 and 2. The pinout is

1	+5V
2	ADC1
3	ADC2
4	GND

Input

Standard TPS input scetion with 4 inputs protected by 220 Ohm resistors.

1	Din.1
2	Din.2
3	Din.3
4	Din.4
5	GND

Output

Standard TPS output scetion with 4 outputs parallel to onboard low current LEDs.

1	Dout.1
2	Dout.2
3	Dout.3
4	Dout.4
5	GND

PWM

PWM Outputs. Frequencie 500Hz.

1	PWM1
2	GND
3	PWM2
4	GND

Power

Power connector to power up the TPS and get some Power from the internal 5V source. (max. 100mA)

- | | |
|---|------|
| 1 | V+in |
| 2 | GND |
| 3 | +5V |
| 4 | GND |

Servo

There are 2 servo connections on this board.

- | | |
|---|-----|
| 1 | PWM |
| 2 | +5V |
| 3 | GND |

RC

There are two RC inputs for standard model receivers. The Pulse should be between 500us and 1500us. The +5V pin can be powered with the internal source when the jumper A is closed. If you don't want to use the internal source please remove the jumper.

| 1 | PWM |
| 2 | +5V (|
| 3 | GND |

Switches

The switches can be placed outside, too.
